

Intelligent Battery Charger

· High Reliable Intelligent Battery Charger ·

The NPB and NPP series are MEAN WELL's new generation of high-power density smart chargers. The NPB-120/240/360 series adopt a high efficiency hardware design, allowing the products to operate both efficiently and stably. The NPB-450/750/1200/1700 series are fully digital designed products and feature the benefits of miniaturization, high efficiency and intelligence. Being a high efficiency hardware and microprocessor power management design, with four charge curve selection (one programmable and three embedded) and the world's first invention: auto ranging charge, the chargers have the ability to cope with various batteries from different brands, such as lead-acid batteries (flooded, gel and AGM) and li-ion (lithium iron, lithium manganese), which some may require special charge treatment. Users also can adjust and modify charge parameters (charge voltage/current, cut-off voltage/current...etc.) in each charge stage via the built-in CAN bus interface, some battery protection functions, in addition, may be disabled through the intelligent communication interface. The whole NPP family is equipped with both charger and power supply modes. These two modes can be set freely according to user's demand. In the charger mode, a three-stage charging function is provided, and the charging voltage and current can be adjusted according to different batteries. If it's in the power supply mode, it will be able to driver general loads. The flexible and intelligent design of the NPB and NPP series can provide a perfect solution for complex battery applications.

1. Safety Guidelines

- It is suitable for lead-acid batteries (flooded water type, gel colloid type, AGM adsorption glass fiber) or (lithium iron, lithium manganese, lithium ternary...etc.)
- The charger must be installed in a dry and well ventilated area. It should not be exposed to rain or snow.
- All failures should be examed by the qualified technician.
- The cables between charger and battery should be kept as short as possible to prevent excessive voltage drop (suggested cable length: 50cm~100cm). Too much voltage drop will lead to longer charging period.
- Make sure charging voltage and current meet battery's specification.
- Refrain from connecting new and old batteries in series.
- Charger should be in the OFF mode before making battery connection or disconnection.
- For auto ranging. Please refer to the manual before using this function. And note that, it must work together with battery that built-in BMS.
- This equipment is not suitable for use in locations where children are likely to be present.
- The protective earthing is used as a safeguard, the instructions shall require connection of the equipment protective earthing conductor to the installation protective earthing conductor (for example, by means of a power cord connected to a socket-outlet with earthing connection).
- Indoor use only.

2.Introduction

2.1 Model number

2.2 Features

- It is suitable for lead-acid batteries and lithium iron batteries
- 2 or 3-stage charging curve by DIP S.W.
- 4 charging curves ready to use) only for NPB-450/750/1200/1700)
- Built-in active PFC function
- Built-in CANbus protocol for control and monitoring (Only for NPB-450/750/1200/1700)
- Protections: Short circuit/Over voltage/Over temperature/Battery under voltage and over voltage/Battery reverse polarity)
- Auto ranging function (Only for NPB-450/750/1200/1700)
- Both charger mode or power supply can be chosen accordingly
- LED indicator: status/abnormal indication
- DEKRA/UL/EAC/CE/UKCA certified
- 3 years warranty

Note: For instruction of EN60335-1/2-29

- This product is a built-in battery charger and is planned to be installed in caravans and other similar vehicles. This product can charge at least one cell rechargeable lead-acid or lithium-ion battery or one battery pack. When charging more rechargeable lead-acid or lithium-ion batteries or battery packs, please refer to the recommended capacity in this manual. It is recommended that the capacity does not exceed the maximum battery capacity recommended in this manual. Do not charge non-rechargeable batteries.
- The battery terminal not connected to the chassis has to be connected first. The other connection is to be made to the chassis, remote from the battery and fuel line. The battery charger is then to be connected to the supply mains.
- After charging, disconnect the battery charger from the supply mains. Then remove the chassis connection and then the battery connection.
- The connection to the supply mains is to be in accordance with the national wiring.
- The appliance is not to be used by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction.
- Children being supervised not to play with the appliance.
- Connection of the appliance to the supply mains and the interconnection of any separate components.
- Necessity to allow disconnection of the appliance from the supply after installation.

3.Installation & Wiring

3.1 Precautions

- Please do not install in places with high moisture or near water.
- Please make sure the ventilation is not blocked with force air cooling models. We recommend that there should be no barriers within 15cm of the ventilating slits, which is shown as follow.

Figure 3-1 set-up recommendation

3.2 Installation procedures

- 1 Please turn off the charger first.
- ② Select proper cable for connection between battery and charger by referring to section 3.3
- ③ Connect the positive polarity of battery to the positive of charger, and connect the negative polarity of battery to the negative of charger.

4 Turn the power switch to "ON" position. If LED show in GREEN, it states that the unit is in either charging or normal operation. Please refer to chapter 4.2 for detail explanation of LED indication.

3.3 Cable selection

Wire connections should be as short as possible and less than 1 meter is highly recommended. Make sure that suitable wires are chosen based on safety requirement and rating of current. Small cross section will result in lower efficiency, less output power and the wires may also become overheated and cause danger. For selection, please refer to table 3-1.

AWG	Cross-section Area(mm²)	Maximum Current(A) UL1015(600V 105℃)
18	0.8	6
16	1.3	8
14	2.1	12
12	3.3	22
10	5.3	35
7	10	46
6	16	60
4	25	80
2	43	110

Table 3-1 Recommendations for the use of wires

3.4 Battery selection

Battery types: Lead acid or lithium ion batteries Battery capacity: Please refer to the following table

Models	Battery capacity recommendation				
Models	12V model	24V model	48V model	72V model	
NPB-120	20-90AH	15-50AH	7-25AH		
NPB-240	55-180AH	30-100AH	15-50AH	NA	
NPB-360	65-195AH	40-125AH	20-65AH		
NPB/NPP-450	90-300AH	45-155AH	24-80AH	19-64AH	
NPB/NPP-750	150-500AH	80-260AH	40-130AH		
NPB/NPP-1200	240-800AH	120-420AH	60-210AH	NA	
NPB/NPP-1700	300-1000AH	200-640AH	100-330AH		

NOTE:

- 1.Using batteries with greater capacity than recommendation will not damage the battery, but extend charging period is expected.
- 2.Please contact battery supplier for charging characteristics if it's not clear.

3.5 Serial and parallel connection of battery

 Serial connection: When connect 2 batteries in series, it doubled the output voltage, but the capacity remains. Ex: 2pcs of 12V 100AH in series, become a 24V 100AH battery.

 Parallel connection: When 2 batteries connected in parallel, output voltage remains, but the capacity will double.
 Ex: 2pcs of 12V 100AH connect in parallel, become a 12V 200AH battery.

4. User Interface Panel

4.1 Panel description

(A) Power switch:

The charger will turn on if the power switch is in ON position. And it will turn off if it's in OFF position.

- **B** AC input
- © LED indicator:
 To show the status of unit.
- DIP switch:
 It is used for charging curve selection. Please refer to chapter 5.2 for detail.
- © Control Pin:
 It is used for control and monitoring function. Please refer to chapter 4.3 and 4.4.
- For output current setting.
- © Vo ADJ: For output voltage setting.

(H) Ventilations slits:

- These ventilation slits achieved well ventilation to ensure the durability of the unit.
- (1) Terminal for battery connection.

4.2 LED Indicator

5.2 Function Description

$5.2.1\,Explanation\,of\,DIP\,switch(NPB\,only)$

- The NPB series is equipped with a DIP switch, which can be used to switch between 2-stage or 3-stage.
- For NPB-450/750/1200/1700, the dip switch not only can be used to switch the number of charging stages, but also choose between 4 preset charging curves. For details, please refer to chapter 5.3 and 5.4.

NPB-120/240/360(Default set as 3 stage)

Switch

CII				
1	2	3	Description	
OFF: 3 stage ON: 2 stage	OFF	OFF	Default, programmable	
	ON	OFF	Pre-defined, Gel battery	
	OFF	ON	Pre-defined, flooded battery	
	ON	ON	Pre-defined, AGM battery,LiFe04	

NPB-450/750/1200/1700 (Default set as 3 stage, Default programmable)

5.2.2 Charger mode/ power supply modes switching(NPP only)

Use this function to set the working mode of the NPP series.

- Charger mode: can be used to charge the battery.
- Power supply mode: can be used directly with general loads.

Between PIN3 and PIN4	Modes
Open	Charger
Short	Power supply

2			1
4	Charger /PSU	Charger /PSU	3
	71.55	7.50	
14			13
	<u> </u>	Ó	

5.2.3 Remote ON/OFF(NPB/NPP-450/750/1200/1700)

By using the DIP switch to change the operation status.

Between PIN 7 and PIN 8	Charger
Short	Remote ON
Open	Remote OFF

00/1/00/				
	2			1
	8			7
		+12Vaux	Remote ON-OFF	
	14			13
				ı
		6	Ó	

Charger OK signal is a TTL level signal. The maximum sourcing current is 10mA.

	Charger OK signal	Charger status	
"High" : 4.5 ~ 5.5V		Work normally	
	"Low" : -0.5 ~ 0.5V	Failure or protection function activated	

NOTE: GND-AUX could be either PIN9 or PIN10

5.2.5 Battery OK signal(NPB/NPP-450/750/1200/1700)

TTL signal is used for battery OK, with maximum of 10mA.

Battery OK signal	Charger status	
"High" : 4.5 ~ 5.5V	Charging completed	
"Low" : -0.5 ~ 0.5V	Charging	

NOTE: GND-AUX could be either PIN9 or PIN10

5.2.6 Temperature compensation(NPB-450/750/1200/1700)

- The RTH that comes with the products, can be connected to the battery for sensing the temperature of battery. The charge is able to work normally without the sensor RTH.
- The parameter is default as -3mV/°C /Cell, with the NTC NSG05C250J5-500V the comes with the product, and connect to RTH+/RTH-panel.

Model	Upper limit of voltage compensation	Lower limit of voltage compensation	Compensation range of Temperature
12V	15.3V	13.2V	
24V	30.6V	26.4V	
48V	61.2V	52.8V	0 ~ 40℃
72V (NPB-450 only)	76.5V	66V	

NOTE:

- 1.If the necessary parameter is different from factory setting, SBP-001 or CANbus shall be used to correct the parameter.
- 2. The compensation will only activate during stage 3.

5.2.7 Auto ranging function(NPB-450/750/1200/1700)

• The MCU built-in charger will calculate the configuration and parameter of the battery pack and finish the charging sequence automatically. Through the auto ranging function, users can easily finish charging sequence without setting charging curves.

/ Caution:

NPB-450/750/1200/1700 Covers 3 different charging voltage range: 10.5V-21V(12V Model);21V-42V(24V Model); 42V-80V(48V Model) • 54-100V(72V Model · NPB-450 only)Li-ion battery could be dangerous if wrong voltage or sequence is applied. Ex: One battery possess 14.6V as highest charging voltage, NPB-xxx-12 is suitable in this case. Please ensure that auto ranging function only work with lithium batteries with BMS function.

Setting of auto ranging function

NPB-450/750/1200/1700 are preset with charging curves, when intent to activate auto ranging function, Procedures below must be follow:

- ① ALL DIP switch for charging curve setting are switch to OFF position before applying AC main.
- (2) Applying AC main under remote OFF condition
- ③ Switch the DIP switch from all OFF to all ON, and then again, back to all OFF in 15 seconds.
- 4 If LED flashes in GREEN for 3 times, it means the setting is succeeded.
- ⑤ Remote ON the unit, and it's now in auto ranging mode. NOTE:
- 1.Auto ranging function only suitable to work with lithium battery with BMS
- 2.Temperature compensation function is not supported when using auto ranging function.
- 3. Under auto ranging mode, user is not allow to choose 2 or 3 stage charging curve, but Io ADJ can be used to adjust suitable charging current if needed.(default: 100%) °
- 4. If there is anything unclear, please contact with MEAN WELL or authorized distributor.

5.2.8 Back to factory setting

To reset the unit back to factory setting, unit must switch the DIP switch for charging curve under remote OFF condition. Detail procedures are as follow:

- ① ALL DIP switch for charging curve setting are switch to ON position before applying AC main.
- 2) Applying AC main under remote OFF condition.
- (3) Switch the DIP switch from all ON to all OFF, and then again, back to all ON in 15 seconds.
- (4) If LED flashes in GREEN for 3 times, it means the setting is succeeded.
- (5) Remote ON the unit, and it's now back to factory setting.

5.2.9 FAN control

NPB-360/NPP-450/750/1200/1700: FAN will turn ON/OFF based on the internal temperature.

NPB-450/750/1200/1700: FAN will spin under different speed according to the temperature differences.

5.3 Operating modes(2/3 stage)

NPB adopts both 2 and 3 stage charging curves for selection, but NPP only possess 3rd stage charging curve. 2 stage is for easy and fast charging. 3rd stage will turn off after first 2 stages of charging finished. Users can choose between 2 or 3 stage according to the demand.

5.3.1 2 stage charging(DIP switch turn to 2 stage)

In the initial stage of charging, the charger charges the battery with the maximum current, and the fan is ON (built-in fan model). After a period of time (depending on the battery capacity), the charging current gradually decreases. When the charging current drops to 10% of the rated current. LED indicator lights up in green, indicating that the charging process is complete.

NPB-450/750/1200/1700 will turn off the output after the end of the 2-stage charging, on the contract NPB- 120/240/360 will continue to work under 3^{rd} stage.

NPB-120/240/360 2 stage charging curve

NPB-450/750/1200/1700 2 stage charging curve

Figure 5.1 Embedded 2 stage charging curve(Defult)

Explanation of 2 stage charging curve

- 1 Initial stage (battery analysis):
 - Charger will detect and determind if the battery is properly connected, is it connected reversely? or is it already fully charged?
- * Only with NPB-450/750/1200/1700 series.
- ② Stage 1(Constant current):
 - Hight constant current is applied for fast charging, until the voltage of battery reaches to boost voltage.
- 3 Stage 2 (Constant voltage):
 - In this stage, charger apply a contant voltage on battery. Charging current gradually decrease, and shut down when charging current reach 10% of rated current.
- * Suitable for lead-acid batteries, such as flooded water type, Gel colloid type, AGM adsorption glass fiber. Or, lithium battery, such as lithium iron, lithium manganese, lithium ternary.
- * NPB-120/240/360 remain floating charging after 2nd stage charging is finished.

5

5.3.2 3 stage charging(DIP switch turn to 3 stage

In the initial stage of charging, the charger charges the battery with the maximum current, and the fan is ON (built-in fan model). After a period of time (depending on the battery capacity), the charging current gradually decreases. When the charging current drops to 10% of the rated current. LED indicator lights up green, indicating that the charging is complete. And the charger remains float charging stage.

Figure 5.2 3 stage charging curve (Defult)

Explanation of 3 stage charging curve

- ① Initial stage (battery analysis):

 Charger will detect and determind if the battery is properly connected, is it connected reversely or it is already fully charged.
- * only with NPB-450/750/1200/1700 series.
- ② Stage 1(Constant current):

 Hight constant current is applied for fast charging, until the voltage of battery reaches to boost voltage.
- ③ Stage 2(Constant voltage):
 In this stage, chager apply a contant voltage on battery. Charging current gradually decrease, and shut down when charging current reach 10% of rated current.
- ④ Stage 3(Float charging):

 The charger is able to provide a float voltage after 2 stage charging, in order to keep the battery fully charged at all times.

 Especially suitable for lead-acid batteries.
- * Suitable for lead-acid batteries (flooded water type, Gel colloid type, AGM adsorption glass fiber).

5.4 Setting of charging curve(NPB-450/750/1200/1700)

5.4.1 Charging curve setting through DIP switch.

The charging curve can be adjusted through the DIP 12 switch on the panel. By following the chart below, there are both 2 and 3 stage charging curves that can be choose accordingly.

Built-in 2 stage charging curves

DIP S.W position			12V model						
1	2	3	Description	CC (default)				Vboost

5.4.2 Smart charging curve programming

SBP-001 is a smart battery charging programmer developed by MEAN WELL, which can set the charging curves of the NPB series through editing software. SBP-001 provides functions such as charging curve adjustment and battery temperature compensation. Please set the DIP switch pin to Default, programmable (PIN2: OFF; PIN3: OFF) before use. Take NPB-1200 as an example, install configuration and software interface are shown as below. Please refer to "SBP-001 Smart Battery Charging Programmer User Manual" for details.

User Interface:

5.5 CANBus Protocol(NPB-450/750/1200/1700)

With CANBus protocol, control and monitoring function can be realized. It is helpful when users intend to modify the parameters remotely. Users can access the master and modify the parameters through CANBus, which include, ON/OFF, output voltage/current, temperature. More to that, users can even change the charging curve parameters, such as constant current level, boost voltage, float voltage and timeout function. For detail, please refer to following chapter.

5.5.1 CANBus specifications

- Physical layer specification
 This protocol follows CAN ISO-11898 with Baud rate of 250Kbps.
- Data frame
 This protocol uses Extended CAN 29-bit identifier frame format or CAN 2.0B.

• Communication Timing

Min. request period (Controller to PSU/CHG): 20mSec $^{\circ}$ Max. response time (PSU/CHG to Controller): 5mSec $^{\circ}$ Min. packet margin time (Controller to PSU/CHG): 5mSec $^{\circ}$

5.5.2 CANBus address setting

 When using CANBus, each charger must equip with unique address for individuals.
 A0~A1 of CN71 is used to define the address(with maximum of 4 address), together with GND(Pin 4).

Between A0/A1 and GND(Single)	logic
Open	1
Short	0

Device No.	Device address			
Device No.	A1	A0		
0	0	0		
1	0	1		
2	1	0		
3	1	1

0 = Disabled(default)

1 = Enabled

Bit 2 CCTOE: Constant current stage timeout indication enable

0 = Disabled(default)

1 = Enabled

SYSTEM_CONFIG:

Low byte	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
Definition						OPERATI	ON_INIT	

Low byte

Bit 1-2 OPERATION_INIT: Initial operational behavior

00 = Power on with 00h: OFF

01 = Power on with 01h: ON

10 = Power on with the last setting

11 = No used

NOTE: Convertion of setting and reading are define as follow:

Actual reading value = reading from protocol × Factor(F value).

Factor must refer to the scaling list of each mode.

EX: Vo_real(Actual output voltage) = READ_VOUT × Factor.

If factor of a model is 0.01 for READ_VOUT, and protocol reads 0x0960 (Hexadecimal) = >2400 (Decimal), Then Vo_real = $2400 \times 0.01 = 24.00$ V.

5.5.4 CANBus value range and tolerance

(1)Display paramters

5

CANBus Command		Mode		Display value rang	Tolerance

6

6. Protections and failure correction

6.1 Protections

6.1.1 Input under voltage protection(NPB-1200/1700)

When input voltage dropped, under voltage protection will activate and shut down the charger. When input voltage back to operating rang, charger will automatically recover.

6.1.2 Over voltage protection

When output voltage over specification, over voltage protection will be activated, and shuts down. When the faulty condition removed, re-power on to remove the protection.

6.1.3 Short circuit protection

When output circuit is shorted, charger will stay in constant current mode to limit the output, and shut down after 5s. Repower on to recover, after removing faulty condition.

6.1.4 Battery under voltage and over voltage protections (NPB-450/750/1200/1700)

When the voltage of battery is too low(8V(12V model)/16V(24V model)/32V(48Vmodel)/40V(72V model)), charge will shut down to prevent damage to the battery. More to that, when the voltage of battery is too high, charger will also turn off to protect the circuitry. Re-power on after the faulty condition is removed.

6.1.5 Over temperature protection

When the internal temperature of charger is too high, charger will shut down for protection. Charger will turn back on automatically if the temperature dropped down.

6.1.6 Battery reverse polarity protection(NPB-120/240/360/450/750/1200/1700) NPB-120/240/360 has a built-in fuse and diode. When the polarity is reversed, the charger output will be off and the fuse will blow for protection.

NPB-450/750/1200/1700 has a built-in battery reverse connection detection circuit. When the battery is reversed, the charger will turned off for protection.

6.2 Failure correction

Status	Possible cause	Suggestions for Fault correction	
Chargoric not	Power OFF	Please turn ON the charger	
Charger is not charging	Remote OFF	Please ensure remote on/off connect to 12V properly.
